Revitalizador T.Top+ | RR1250

Field of application. Maintenance of doors, windows and furniture. RR1250 can also be used on PVC and aluminium surfaces.

Information. T.Top+ provides brightness and smoothness to the coating. Thanks to its exclusive composition, RR1250 penetrates the microcracks of the coating within a few minutes and repairs the damages caused by time. T.Top+ nourishes the coating, reactivating the original elastic features and makes it waterproof.

Note: it is suitable for the treatment of coated surfaces with water-based and solvent-based products, both transparent and lacquered (and also white surfaces, it doesn't yellow).

Instructions. Before using the Brightener, clean the surface with T.Clean RR1050. Spray T.Top+ and spread it with a microfibre cloth. Let it dry. Avoid the application of T.Top+ in rainy days or during the direct exposition to the sun. Possible accumulations of T.Top+ on glass can be removed with a microfibre cloth. Shake the container before the use.

Packaging. 0,75 L
